

Instruction “Psoriatynin”

Name

Cream “Psoriatynin”.

Action

Provides keratolytic, anti-inflammatory and softening effects.

Indications

Intended for cosmetic care of skin in psoriasis, neurodermatitis and lichenified eczema.

How to use

Apply a thin layer to affected areas 1–2 times daily, gently in the direction of hair growth. For large areas, use a “strokes” method: strips about 1 cm wide with 2–3 cm gaps. During use avoid direct sun and UV procedures; before tanning wash the cream off with soap and water. If the skin is very dry, you may additionally use a hypoallergenic moisturizer.

During care, old plaques may fade and pigment spots can remain. Continue application until the skin is completely clear.

If you have used topical steroids, it is recommended to take a 2–3 week break before starting Psoriatynin.

Adverse effects

Rarely itching, burning or folliculitis may occur.

Contraindications

Individual intolerance to components. Infectious and parasitic skin diseases. Renal dysfunction, pregnancy, lactation, children under 2 years.

Dosage form

Jars of 20, 50 and 100 g.

Storage

Shelf life 36 months at +5...+15 °C.

Composition

Chelidonium, Calendula and Bidens extracts; peppermint and eucalyptus oils; glycerin; excipients. Base: purified solidol (petrolatum).

Is not a medicinal product.
